

T A S K I Z

Client Acquisition & Growth Engine

A practical go-to-market system to drive app downloads, activate contractors, and convert early users into paying customers.

PREPARED FOR

Taskiz.ai

PREPARED BY

Glampire Labs · Telegate AI

DATE

June 25, 2026

CORE RECOMMENDATION

Launch Taskiz with a focused growth engine: targeted contractor data, warm outbound, CRM follow-up, personal onboarding, activation tracking, and small paid tests only after the message is proven.

Executive Summary

Taskiz should not launch as a broad software platform or as a vague AI application. The strongest path is to launch as a **simple mobile business app** for solo contractors and small service businesses who need to manage customers, jobs, schedules, estimates, and invoices from their phone.

The immediate goal is not just app downloads. The real goal is **activated users**: contractors who create their first customer, first estimate, first job, first calendar event, or first invoice inside Taskiz.

To reach that goal, Taskiz should use a focused acquisition system powered by Telegate CRM, targeted contractor data, warm prospecting tools, AI-assisted follow-up, onboarding automation, and performance tracking.

MASTER ONE-LINER

Taskiz helps contractors run the business side of their business from their phone.

02

Strategic Launch Positioning

The launch message should be simple, practical, and honest. Contractors should immediately understand what Taskiz does and why it matters.

POSITIONING ELEMENT	RECOMMENDED DIRECTION
Category	Mobile business app for contractors

Primary ICP	Solo handyman businesses, small general contractors, painters, remodelers, and small service operators
Primary Promise	Manage jobs, customers, schedules, estimates, and invoices from your phone
Main Differentiator	Simpler and more mobile-first than heavy field service platforms
AI Angle	AI Copilot helps with real contractor admin tasks, such as creating estimates, invoices, and events
Avoid for Launch	AI phone receptionist, never-miss-a-call, full field service platform, and SMS/email inbox claims — until fully visible and reliable

03

Growth Engine Overview

The recommended growth engine connects lead data, prospecting, CRM automation, app downloads, onboarding, and conversion into one system.

STAGE	PURPOSE	TOOL / OWNER
Audience Data	Find targeted contractor businesses that match the ICP.	AudienceLab, Telegate DaaS, Google Maps, local directories
Prospecting	Start conversations with likely buyers and beta users.	Gojiberry, founder-led outreach, email/social channels

CRM Capture	Centralize every lead, reply, booking, and follow-up.	Telegate CRM / GHL
AI Follow-Up	Automatically follow up with interested leads and invite them to download or book onboarding.	Telegate AI agents
App Install	Send beta links and track install / download completion.	App Store / Play Store / TestFlight / tracking links
Activation	Guide users to create their first customer, estimate, job, calendar event, or invoice.	Onboarding sequence, founder support, in-app analytics
Conversion	Move activated users into a paid Founder Plan.	Telegate pipeline, offer sequence, manual check-ins

04

Recommended Tool Stack

The stack should be powerful but not overbuilt. The first version should focus on clean data, direct outreach, fast follow-up, and measurable activation.

LAYER	RECOMMENDED TOOL	ROLE IN THE SYSTEM
System of Record	Telegate CRM / GoHighLevel	Own the pipeline, contact records, automations, calendars, tags, tasks, and reporting.
AI Follow-Up	Telegate AI Agents	Respond to interested leads, send app links, book onboarding calls, and reactivate stalled prospects.

Audience Data	AudienceLab / Telegate DaaS	Build contractor lead lists, enrich CRM data, create paid media audiences, and segment by trade / location.
Warm Prospecting	Gojiberry	Identify and prioritize high-intent or lookalike contractor prospects and start soft outreach.
Integration Layer	n8n or Make	Move lead data, form submissions, app events, and prospecting responses into Telegate CRM.
App Analytics	Firebase or PostHog	Track downloads, onboarding completion, first customer, first estimate, first invoice, and retention.
Cold Email (optional)	Smartlead or Instantly	Use only if higher-volume cold email is needed beyond Gojiberry and founder-led outreach.
Paid Media (later)	Meta , Google , YouTube , TikTok	Run small paid tests after the demo, landing page, and message are validated.

How to Use Gojiberry

Gojiberry should be used for warm prospecting and signal-based outreach. It should not replace the CRM. Its job is to help identify and start conversations with prospects who are more likely to care about Taskiz.

- Build lookalike profiles based on the first successful Taskiz users.
- Prioritize owner-operators, handymen, painters, remodelers, and small contractors.

- Look for prospects showing interest in contractor software, invoices, estimating, job management, QuickBooks, Google Calendar, or small business tools.
- Send soft beta invitations instead of aggressive sales messages.
- Push all interested replies into Telegate CRM immediately.

RECOMMENDED OUTREACH ANGLE

“We are inviting a small group of contractors to test a simple mobile app for managing customers, jobs, schedules, estimates, and invoices from the phone. We are looking for honest feedback from owner-operators who work in the field.”

06

How to Use AudienceLab / Telegate DaaS

AudienceLab or Telegate DaaS should be used to build and enrich targeted contractor audiences. This is the data layer that gives Taskiz a clear prospect universe instead of relying only on broad ads.

AUDIENCE SEGMENT	WHY IT MATTERS	RECOMMENDED USE
Handyman businesses	Best first-fit ICP and simple owner-operator workflow.	Beta outreach, founder demos, case studies
Small general contractors	Need customers, jobs, schedules, estimates, invoices, and job notes.	Demo campaigns, onboarding calls, testimonials

Painters & remodelers	High need for estimating, scheduling, customer notes, and invoicing.	Trade-specific landing pages and email angles
Landscapers	Good fit, but may later need recurring job workflows.	Secondary beta cohort
Contractors with weak websites	Often have business volume but poor digital systems.	Direct outreach and organization-focused message
Website visitors & retargeting pools	Useful once traffic begins and identity match-back is available.	Retargeting, CRM enrichment, activation campaigns

Telegate CRM Pipeline

Every lead source should feed into one Taskiz pipeline inside Telegate CRM. This prevents scattered follow-up and makes the launch measurable.

PIPELINE STAGE	MEANING	PRIMARY ACTION
New Lead	A contractor has been added from data, outreach, or form submission.	Enrich, tag, and enter first outreach sequence.
Contacted	Initial message or call has been sent.	Follow up with soft beta invitation.
Replied	Prospect responded with some level of interest.	Telegate agent or team member qualifies and sends next step.

Beta Interested	Prospect wants to see or try the app.	Send app link or book onboarding.
App Link Sent	Download link was delivered.	Follow up within 2 hours and 24 hours.
Downloaded	User installed or accessed the app.	Guide to first customer / estimate / invoice.
Activated	User completed one key workflow.	Ask for feedback and introduce Founder Plan.
Onboarding Booked	User scheduled a setup / demo call.	Prepare trade-specific demo and objections.
Paid Founder Plan	User converted to paid early plan.	Collect testimonial and invite referral.
Not Interested / Reactivate	No current need or timing mismatch.	Add to long-term nurture and future feature updates.

08

Automation Sequences

The most important automation is not a complex nurture system. It is a simple sequence that moves a contractor from interest to install to first value.

TRIGGER	MESSAGE GOAL	TIMING
Lead replies or fills beta form	Thank them, explain the beta, and send the app / demo link.	Immediately

App link sent, no install	Ask whether they were able to download and offer help.	2 hours later
Downloaded, no activation	Guide them to create first customer or estimate.	Next day
First estimate / invoice created	Ask for feedback and introduce Founder Plan.	Within 24 hrs
No activity after 7 days	Send a practical use-case reminder or offer 15-minute setup.	Day 7
Activated user after 14 days	Ask for testimonial, referral, and paid conversion.	Day 14
Dormant user after 30 days	Reactivate with new feature / update or personal check-in.	Day 30

Acquisition Campaigns

Taskiz should begin with direct, learning-focused acquisition before scaling paid ads. The first campaigns should be designed to generate conversations, downloads, activation, and feedback.

c1 **Founder Beta Outreach**

- Build a list of 300–500 local contractors using AudienceLab, Telegate DaaS, Google Maps, Yelp, Facebook groups, and local directories.
- Send 100–150 personalized messages per week.
- Primary CTA: join beta or book a 15-minute onboarding call.
- Goal: 20–40 replies, 10–20 onboarding calls, 50+ downloads.

c2 **Local Contractor Communities**

- Post problem-led questions in contractor and small business groups.
- Avoid link dropping. Start conversations first, then invite qualified people privately.
- Use topics such as estimates, invoicing, job notes, customer organization, and software frustration.

c3 **Short Demo Content**

- Create 10–20 short videos showing real app workflows.
- Use direct titles: “Create an estimate from your phone,” “Invoice before leaving the driveway,” “Stop losing job notes in texts.”
- Repurpose videos for landing page, outreach, app store previews, social posts, and ads.

C4 Retargeting & Paid Tests

- Start only after the landing page, demo, and onboarding flow are ready.
- Begin with small budgets on Meta and Google. Test message clarity before increasing spend.
- Retarget website visitors, video viewers, beta form visitors, and uploaded contractor audiences.

10

30 / 60 / 90-Day Roadmap

Three phases turn the system from initial setup into a repeatable, scaling acquisition engine.

Days 1–30 FOUNDATION & BETA ACQUISITION

ACTIONS

Finalize positioning, update landing page, create demo video, build a 300–500 lead list, launch outreach, set up the Telegate pipeline, and onboard first users.

SUCCESS CRITERIA

50+ downloads, 10+ activated users, 20+ meaningful prospect conversations.

Days 31–60 ACTIVATION & CONVERSION

ACTIONS

Improve onboarding, track activation events, collect objections, publish demo content, and offer the \$29 Founder Plan to activated users.

SUCCESS CRITERIA

10–25 paying users or clear pricing feedback, 3 testimonials, validated ICP language.

Days 61–90 REPEATABILITY & SCALING

ACTIONS

Increase the best-performing outreach channel, launch small paid tests, refine audiences, add a referral reward, and update app store copy.

SUCCESS CRITERIA

100 serious beta users, predictable reply rate, measurable cost per signup, clear next ICP decision.

11

Success Metrics

Downloads matter, but Taskiz should optimize for activation and retention. A user who downloads and does nothing is not yet a successful acquisition.

METRIC	WHY IT MATTERS	INITIAL TARGET
Website visitor → signup	Measures clarity of the landing page.	5–10% on warm traffic

Signup → install / download	Measures app download friction.	50%+ from beta users
Onboarding completion	Measures setup usability.	50%+ of beta cohort
First customer created	Early activation signal.	60%+ of onboarded users
First estimate or invoice	Core value signal.	40%+ of onboarded users
First job / calendar event	Workflow adoption signal.	30%+ of onboarded users
Week 4 retention	Shows whether the app becomes part of weekly workflow.	25–40% early benchmark
Beta → paid conversion	Measures willingness to pay.	10–20% early benchmark

12

Recommended Launch Offer

The launch offer should reduce friction and create urgency without overcomplicating pricing.

FOUNDER BETA PLAN

\$29/mo

Includes AI Copilot, voice interaction, customers / CRM, jobs & tasks, calendar, estimates, invoices, PDFs, QuickBooks sync, and Google Calendar sync.

Keep the plan simple until activation and retention data are clear.

Do not create multiple tiers during the beta phase. A simple Founder Plan allows the team to test value, willingness to pay, and retention before adding advanced features or higher-priced packages.

Glampire / Telegate Scope of Work

Glampire and Telegate can support Taskiz by building the acquisition and activation system around the app. This is not just marketing; it is a full growth operations layer.

WORKSTREAM	DELIVERABLES
Strategy & Positioning	Launch message, ICP selection, offer structure, outreach angles, objections, and campaign roadmap.
Data & Lead Lists	Contractor audience builds, enriched lead lists, segmentation by trade and geography, and lead scoring.
CRM Buildout	Taskiz pipeline, tags, workflows, forms, calendars, source attribution, and reporting views.
Outreach Campaigns	Founder beta outreach, warm prospecting, email / social scripts, and follow-up sequences.
AI Follow-Up	Telegate agent sequences for beta interest, app download follow-up, onboarding reminders, and reactivation.
Content Support	Demo video topics, ad angles, social post ideas, landing page copy, and app store messaging.
Analytics & Reporting	Weekly report on leads, replies, downloads, activations, conversions, objections, and next actions.

Weekly Operating Rhythm

A simple weekly rhythm will keep the launch moving and prevent the team from chasing too many channels at once.

WEEKLY ACTIVITY	OWNER	OUTPUT
Lead list review	Growth / Telegate	New contractor leads added and scored.
Outreach launch	Founder / Growth	100–150 beta invitations sent weekly.
Reply handling	Telegate / Founder	Interested leads qualified and moved to download or onboarding.
Onboarding calls	Founder / Support	Users complete first customer, estimate, job, or invoice.
Feedback review	Product / Growth	Objections, bugs, and feature gaps documented.
Content publishing	Marketing	2–5 short demos or posts published weekly.
Metrics review	Leadership	Download, activation, conversion, and retention numbers reviewed.

Immediate Next Steps

-
- 01 Approve the positioning: Taskiz is a simple mobile business app for contractors.
 - 02 Confirm the first ICP: solo handymen, small general contractors, painters, and remodelers.
 - 03 Build the Taskiz pipeline inside Telegate CRM.
 - 04 Create or import the first 300–500 contractor leads.
 - 05 Connect Gojiberry and AudienceLab / Telegate DaaS outputs into the CRM.
 - 06 Launch the first beta outreach campaign.
 - 07 Personally onboard the first 10–20 users.
 - 08 Track activation, not just downloads.
 - 09 Convert activated users into the \$29/month Founder Plan.
 - 10 Collect testimonials and use them to scale the next campaign.
-

Final Recommendation

Taskiz should launch with a focused growth engine rather than a broad ad campaign. The fastest path to traction is targeted contractor data, soft beta outreach, CRM follow-up, personal onboarding, activation tracking, and measured paid tests only after the message is validated.

BOTTOM LINE

The goal is not more downloads. The goal is the right contractors completing real workflows and converting into paying customers.
